

## **S.B. JAIN INSTITUTE OF TECHNOLOGY MANAGEMENT & RESEARCH, NAGPUR**

### **Practical 03**

**Aim:** Automate student marksheet generation, system information display, Fibonacci and prime number generation, and file management operations using shell scripts to enhance computational efficiency and user interaction.

**Name:** Puja D. Jadhav

**USN:** CM24037

**Semester / Year:** 4<sup>th</sup>/2<sup>nd</sup>

**Academic Session:** 2025-26

**Date of Performance:**

**Date of Submission:**

❖ **Aim:** Automate student marksheet generation, system information display, Fibonacci and prime number generation, and file management operations using shell scripts to enhance computational efficiency and user interaction.

❖ **Tasks to be done in this Practical.**

- a) Write a shell script to generate mark- sheet of a student. Take 3 subjects, calculate and display total marks, percentage and Class obtained by the student.
- b) Write a menu driven shell script which will print the following menu and execute the given task.
  - Display calendar of current month.
  - Display today's date and time.
  - Display usernames those are currently logged in the system.
  - Display your terminal number
- c) Write a shell script which will generate first n Fibonacci numbers like: 1, 1, 2, 3, 5, 13
- d) Write a shell script which will accept a number b and display first n prime numbers as output.
- e) Write menu driven program for file handling activity
  - Creation of file.
  - Write content in the file.
  - Upend file content.
  - Delete file content

❖ **Objectives:**

1. Automate marksheet generation with total, percentage, and class classification.
2. Develop menu-driven scripts for system information and file operations.
3. Generate Fibonacci and prime numbers for user-defined inputs.

❖ **Requirements:**

✓ **Hardware Requirements:**

- Processor: Minimum 1 GHz
- RAM: 512 MB or higher
- Storage: 100 MB free space

✓ **Software Requirements:**

- Operating System: Linux/Unix-based
- Shell: Bash 4.0 or higher
- Text Editor: Nano, Vim, or any preferred editor

❖ **Theory:**

Shell scripting is a powerful way to automate repetitive tasks and manage system operations efficiently. It allows users to write programs using shell commands and scripting constructs. Shell scripts are interpreted line-by-line by a shell interpreter, making them ideal for administrative tasks, file management, and system automation. This practical encompasses a variety of real-world scenarios that demonstrate the utility of shell scripting for computing tasks and resource management.

**1. Marksheet Generation**

This script takes input marks for three subjects, calculates the total marks, percentage, and determines the class of the student based on predefined conditions. Conditional statements (if-else) are used to classify the performance into distinction, first class, second class, or fail. This exercise emphasizes the use of arithmetic operations and decision-making constructs.

Key concepts include:

- Reading user input using read
- Arithmetic operations with `$((expression))`
- Conditional statements for decision-making

**2. Menu-Driven Script for System Information**

Menu-driven scripts enhance user interaction by presenting a list of options for performing different tasks. In this practical, options are provided to display the calendar of the current month, the current date and time, logged-in users, and the terminal number. The script utilizes looping constructs (while) and case statements for structured flow control.

**Commands used:**

- cal for displaying the calendar
- date for showing current date and time
- who to list logged-in users
- tty to identify the terminal

**3. Fibonacci Number Generation**

Fibonacci numbers are a sequence where each term is the sum of the two preceding ones. The script uses iterative constructs (for loop) to generate n terms based on user input. This practical illustrates the use of loop control and variable swapping to generate series data efficiently.

#### 4. Prime Number Display

This script accepts an integer n and outputs the first n prime numbers. A nested loop checks divisibility to determine if a number is prime. The practical demonstrates logic building for number-theoretic operations using loops and conditionals.

#### 5. Menu-Driven File Management

The file handling script enables users to create, write, append, and delete file content. The case construct manages different file operations.

Commands include:

- touch to create files
- cat for writing and appending content
- rm for deleting files

This exercise emphasizes text manipulation, input handling, and file control mechanisms in Unix-like environments.

#### ✚ Diagrammatical View of Shell

❖ CODES

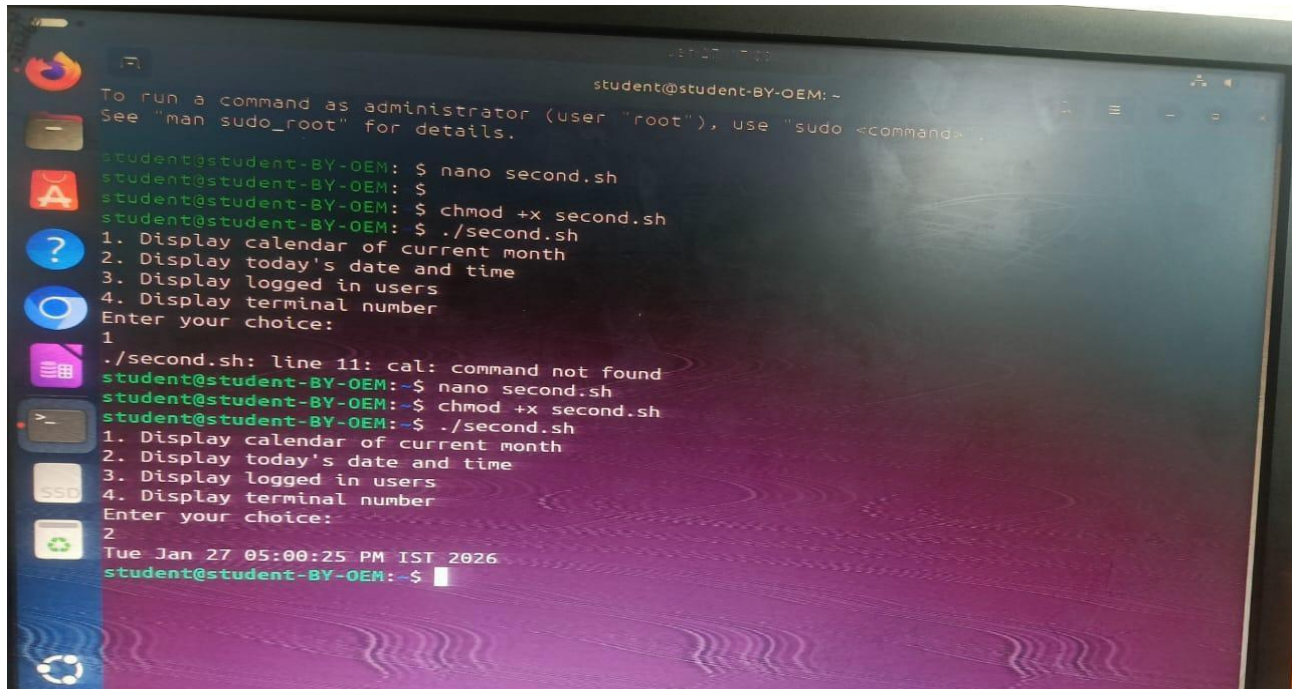

1. Write a shell script to generate mark- sheet of a student. Take 3 subjects, calculate and display total marks, percentage and Class obtained by the student.

Output 1:

```
student@student-BY-OEM: ~$ nano marksheet.sh
student@student-BY-OEM: ~$ nano marksheet.sh
student@student-BY-OEM: ~$ nano marksheet.sh
student@student-BY-OEM: ~$ nano marksheet.sh
student@student-BY-OEM: ~$ chmod +x marksheet.sh
student@student-BY-OEM: ~$ ./marksheet
bash: ./marksheet: No such file or directory
student@student-BY-OEM: ~$ ./marksheet.sh
Enter Student Name:
puja
Enter marks of Subject 1:
70
Enter marks of Subject 2:
80
Enter marks of Subject 3:
85
-----
STUDENT MARKSHEET
Name : puja
Total : 235
Average : 78
Result : PASS
student@student-BY-OEM: ~$
```

2. Write a menu driven shell script which will print the following menu and execute the given task.
- Display calendar of current month.
  - Display today's date and time.
  - Display usernames those are currently logged in the system.
  - Display your terminal number

**Output 2:**

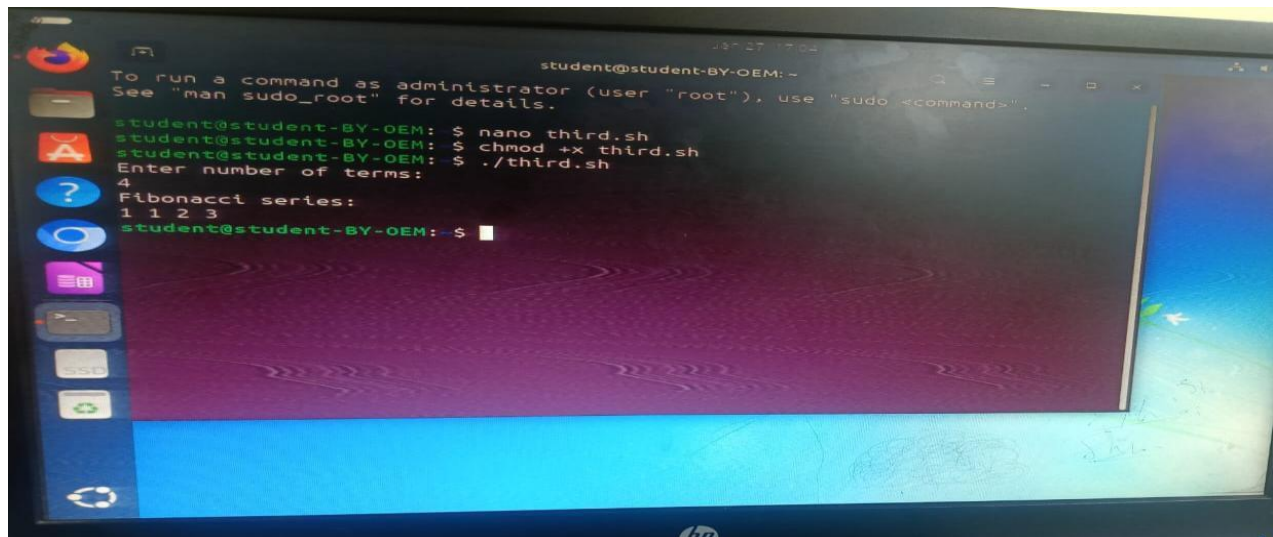

```
student@student-BY-OEM: ~
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

student@student-BY-OEM: $ nano second.sh
student@student-BY-OEM: $
student@student-BY-OEM: $ chmod +x second.sh
student@student-BY-OEM: $ ./second.sh
1. Display calendar of current month
2. Display today's date and time
3. Display logged in users
4. Display terminal number
Enter your choice:
1
./second.sh: line 11: cal: command not found
student@student-BY-OEM:~$ nano second.sh
student@student-BY-OEM:~$ chmod +x second.sh
student@student-BY-OEM:~$ ./second.sh
1. Display calendar of current month
2. Display today's date and time
3. Display logged in users
4. Display terminal number
Enter your choice:
2
Tue Jan 27 05:00:25 PM IST 2026
student@student-BY-OEM:~$
```

3. Write a shell script which will generate first n Fibonacci numbers like:  
1, 1, 2, 3, 5, 13

Output 3:

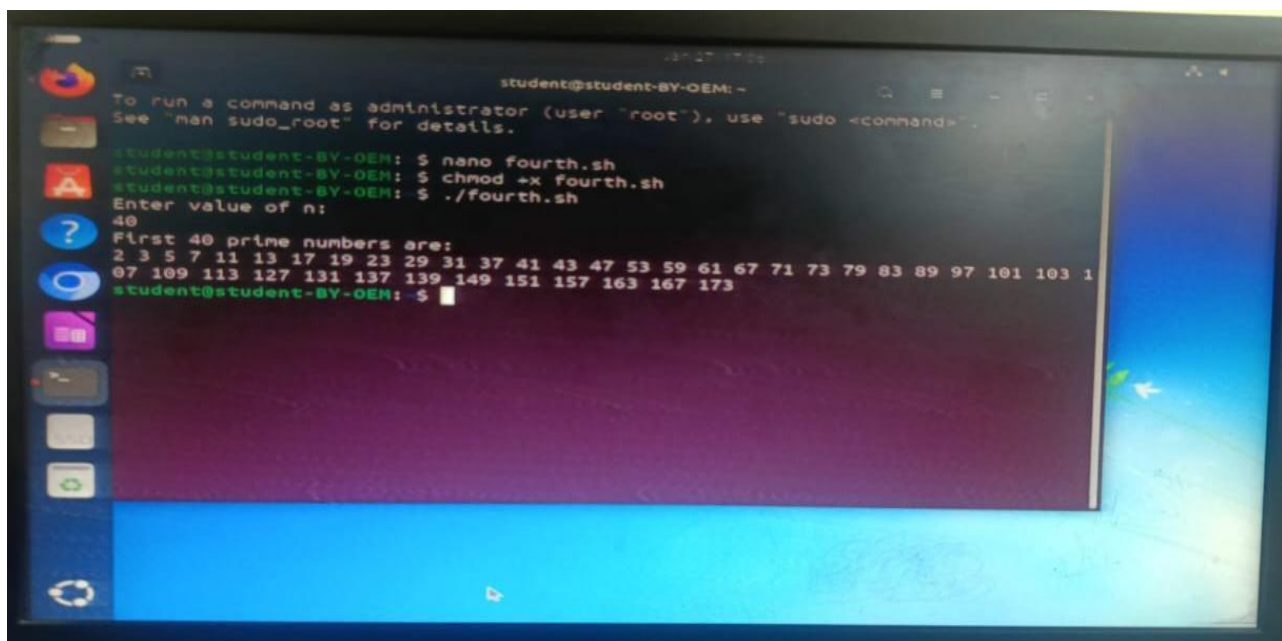

```
student@student-BY-OEM: ~
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

student@student-BY-OEM: $ nano third.sh
student@student-BY-OEM: $ chmod +x third.sh
student@student-BY-OEM: $ ./third.sh
Enter number of terms:
4
Fibonacci series:
1 1 2 3
student@student-BY-OEM:~$
```

4. Write a shell script which will accept a number b and display first n prime numbers as output.

Output 4:

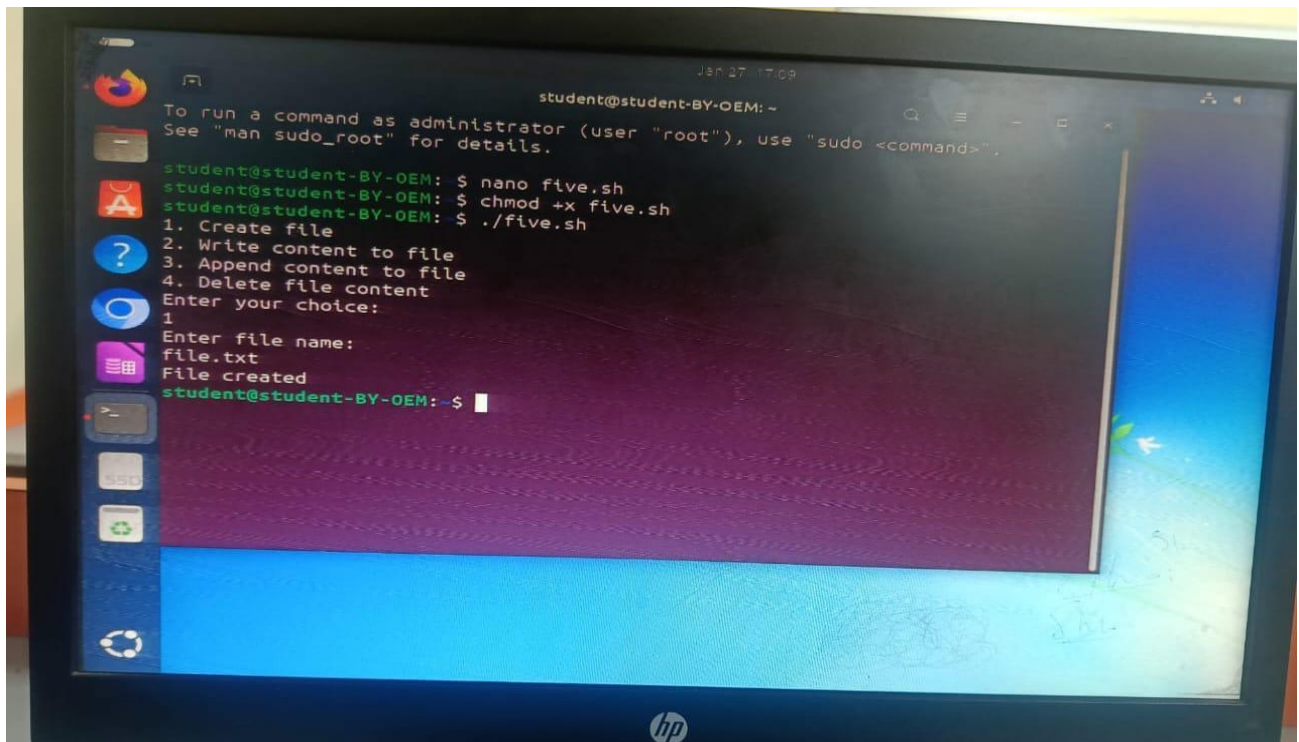

```
student@student-BY-OEM: ~
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

student@student-BY-OEM: $ nano fourth.sh
student@student-BY-OEM: $ chmod +x fourth.sh
student@student-BY-OEM: $ ./fourth.sh
Enter value of n:
40
First 40 prime numbers are:
2 3 5 7 11 13 17 19 23 29 31 37 41 43 47 53 59 61 67 71 73 79 83 89 97 101 103 107 109 113 127 131 137 139 149 151 157 163 167 173
student@student-BY-OEM:~$
```

5. Write menu driven program for file handling activity

- Creation of file.
- Write content in the file.
- Upend file content.
- Delete file content.

**Output 5:**

```
student@student-BY-OEM: ~
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

student@student-BY-OEM: $ nano five.sh
student@student-BY-OEM: $ chmod +x five.sh
student@student-BY-OEM: $ ./five.sh
1. Create file
2. Write content to file
3. Append content to file
4. Delete file content
Enter your choice:
1
Enter file name:
file.txt
File created
student@student-BY-OEM:~$
```

❖ **Conclusion:** In this practical, we conclude that shell scripting efficiently automates tasks like marksheet generation, system information display, number computations, and file management, enhancing system operations and user interaction through command-line utilities.

❖ **Discussion Questions:**

1. What is the purpose of using shell scripting in this practical?
2. Which command is used to display the current date and time?
3. How does the script calculate the Fibonacci sequence?
4. Which command is used to create a file in the file management script?
5. How does the prime number script determine if a number is prime?
